

I am trying to set up the ASGARUS plugin. So far so good, except; the login form does not appear.  
 Can you help me with the exact settings that need to be made so that the Ultimate Member login screen appears when a registered user logs in?

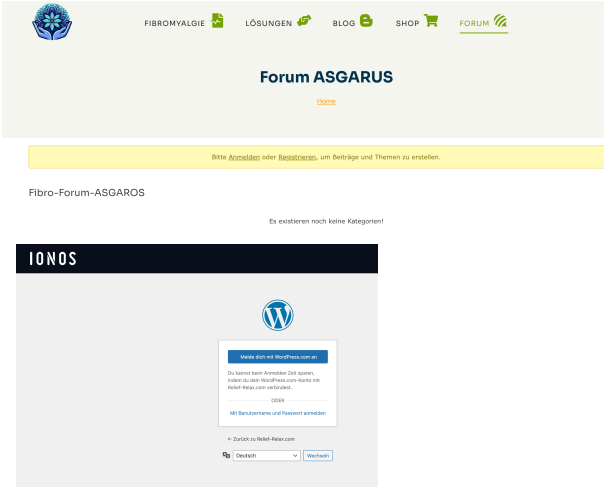

The WordPress Membership “anyone can register” is switched off.

I have installed the following plugins:

- ASGARUS Forum
- TOOLBOX FOR ASGARUS
- Ultimate Member UM

Problem:  
 When I log out of the forum and then try to log in again, the WordPress login screen always appears.  
 However, I would like the Ultimate Member login screen to appear.

All other Ultimate Member masks appear as set.
